

# UltraBatch™ Workstation Improves Order Picking Throughput

## The UltraBatch™ System Provides Impressive Results in Both New and Existing Order Fulfillment Operations.

The UltraBatch workstation allows operators to focus entirely on the picking process. Lights automatically indicate the quantity of the pick and direct the operator where to place items. When the order is complete, the UltraBatch™ System automatically moves the order to the next workstation, packing or shipping operation and inducts a new order into the batch, all without operator assistance.

Throughput improvement allows existing systems to be downsized, recovering valuable floor space. Increased speed and accuracy reduces labor requirements and can extend order cutoff times.

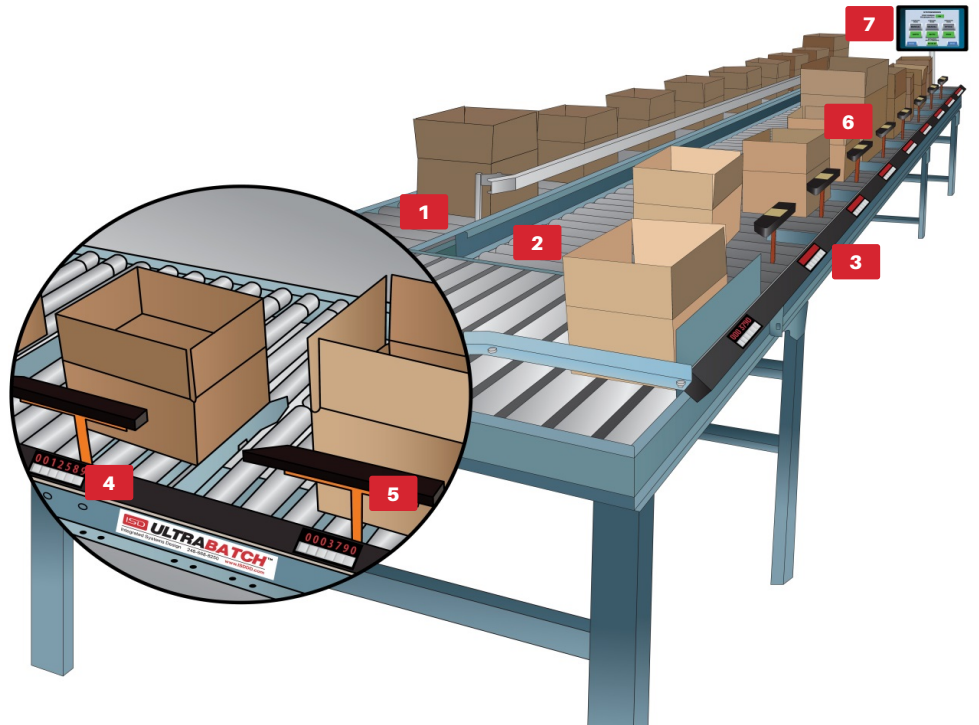

## UltraBatch™ Benefits

- › Increases operator order picking throughput up to 35%
- › Increases total system throughput up to 600%
- › Reduces labor requirements up to 50%
- › Extends order cut-off times
- › 99.99%+ picking accuracy
- › Fast return on investment (ROI)
- › Reduces capital acquisition costs
- › Recovers valuable floor space

## Common UltraBatch™ Applications

- › Order picking and fulfillment
- › Batch picking
- › Order consolidation
- › Returns
- › Reverse logistics
- › Speedy replenishment
- › Kitting

1. Inbound conveyor
2. Outbound conveyor
3. Operator picking area
4. Pick to light displays
5. Order automatically inducted and exported with no labor
6. Handles variable size boxes
7. Software interface

## Ideal for New or Existing Systems

The UltraBatch™ automated batch picking workstation is designed to work with all types of order picking systems including pick modules, horizontal and vertical carousels, Vertical Lift Modules (VLMs), mini-loads, shuttle technologies, floor robots and conveyor systems. It can be easily integrated into existing systems or installed as part of a new system.

### UltraBatch™ System includes

- Pick to light modules
- Order picking software
- Existing or new conveyor
- Easy integration and installation

**Fast ROI:** The UltraBatch™ workstation reduces capital acquisition costs as it is easily integrated into new or existing systems. Improvements in system throughput and reduced labor and installation costs result in a fast return on investment (ROI).

## ISD Guaranteed Performance Program

For organizations looking to guarantee their throughput, ROI and total system, ISD offers a Guaranteed Performance Program for all of its order picking, packing, shipping and assembly systems.
